**Election/Restriction**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- |           |  |
|-----------|--|
| Group I   | Claims 1-3 are drawn to an immunogenic composition and vaccine comprising a dissociated pili comprising at least one immunogenic peptide from Gal-Gal binding pilus-producing bacteria, classified in class 530, subclass 300. |
| Group II  | Claims 4-6 are drawn to a method of producing pili, classified in class 435, subclass 41.  |
| Group III | Claim 7 is drawn to a method of treating or preventing a urinary tract infection, classified in class 424, subclass 190.1.   |

2. Groups I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the peptide of Group I can be made synthetically.

3. Groups I and III are product and process of using. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a material different process of using that product (MPEP 806.05(h)). In the instant case the inventions of Group I may be used for a number of different processes that are very much unrelated. For example, the peptide of Group I can be used as diagnostic reagents in an assay to detect infection or used as

Art Unit: 1645

reagents in other processes such as affinity chromatography for purification of antibodies.

4. Group II and III are drawn to distinctly different methods which differ in the method objectives, method steps and in reagent used. The Group II is drawn to a method of producing pili. Group III is drawn to a method of treating or preventing a urinary tract infection comprising administering a vaccine comprising the pili.

5. The inventions are distinct, each from the other because of the following reasons: Because these inventions are distinct for the reasons given and have acquired a separate status in the art because of their recognized divergent subject matter as shown by their different classification, restriction for examination purposes as indicated is proper. Moreover, in the absence of restriction it would place an undue search and examination burden on the examiner.

6. Applicant is advised that the reply to this requirement to be complete must include an election of invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one

Art Unit: 1645

claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(h).

8. Any inquiry of the general nature or relating to the status of this general application should be directed to the Group receptionist whose telephone number is (703) 308-0196.

Papers relating to this application may be submitted to Technology Center 1600, Group 1640 by facsimile transmission. The faxing of such papers must conform with the notice published in the Office Gazette, 1096 OG 30 (November 15, 1989). Should applicant wish to FAX a response, the current FAX number for the Group 1600 is (703) 308-4242.

Any inquiry concerning this communication from the examiner should be directed to Vanessa L. Ford, whose telephone number is (703) 305-4735. The examiner can normally be reached on Monday – Friday from 7:30 AM to 4:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynette Smith, can be reached at (703) 308-3909.
